

# Nutriplant® SD/SL

Micro Nutrient Root Enhancing Seed Treatment

Nutriplant® SD/SL provides water soluble nutrients to seeds after germination, which leads to better root development, faster emergence and better crop yields.

Watch for earlier germination of Nutriplant® SD/SL treated seeds. Look for more uniform stands and seedlings with more massive root systems than those of untreated seeds. You should also experience fewer weed problems and less replanting in Nutriplant® SD/SL treated fields.

## Benefits

Available in powder (SD) or liquid (SL) form

Replaces talc as your seed lubricant

Boosts crop yields

Enhances seedling vigor

Produces faster and healthier root development and emergence

Larger shoots and root systems

Reduces stress for healthier plants and higher yields

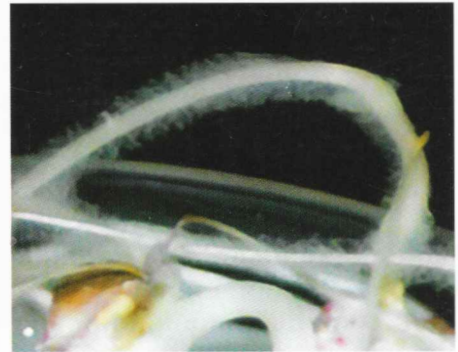

Better fertilizer utilization

Easy to use

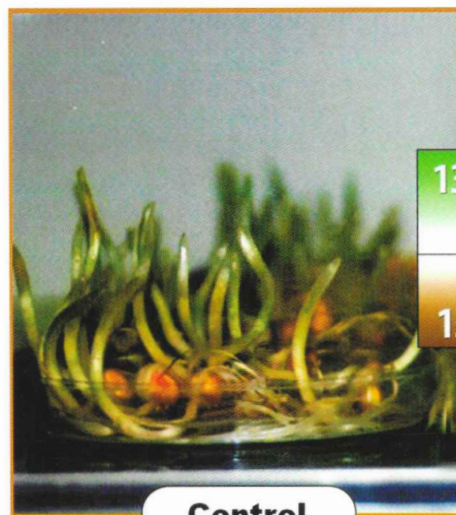

Low cost per acre
